

Arizona Natural Medicine[®] offers **non-steroidal** homeopathic injections by Heel that are highly effective for **treating various pain conditions** and to boost your immune system, especially during cold and flu season. The injections can be used individually or in combination. These intramuscular injections are for **systemic, or body-wide effects** and can be used individually or in combination. Heel injections are indicated for treatment of pain and can be used to treat conditions such as low back pain, pain in any joint (hip, knee, elbow, and shoulder), arthritis, sciatica, muscle tension, pain or spasm and acute injuries. In addition, Heel injections for pain can be used for chronic inflammatory conditions such as osteoarthritis or rheumatoid arthritis and have application for pain or inflammatory conditions in any part of the body.

We also have a signature Heel injection combination to **boost your immunity**. Engystol is anti-viral and helps to support immune function and can be used for either the prevention or treatment of cold/flu. We combine this with Traumeel with its strong anti-inflammatory action and this combo is helpful in decreasing pain or inflammation associated with an upper respiratory infection, sinusitis, sore throat, cough or virus.

Zeel
