

Biopuncture is a simple procedure that is gentle, but has shown to be very effective for several conditions, primarily **acute and chronic pain**. For example, **low back pain, knee pain, arthritis, sciatica, and acute injuries**, etc. The Heel injectables are used for Biopuncture and they contain **natural botanicals and mineral extracts**. There are different formulations with unique functions and can be combined in different ways depending on the condition being treated and your individual case. Biopuncture involves non-invasive, superficial injections just below the skin (subcutaneous injections) near the local area of pain.

Unlike corticosteroid injections that only temporarily reduce inflammation, Heel homeopathic injections work on a biochemical cellular level to modulate the inflammatory response. Over time, Biopuncture can 'reset' the pain response and can help heal the tissues by **stimulating the body to heal itself**.

The homeopathic solutions used in Biopuncture are **all natural** and contain no medications. They have proven to be **safe, effective and generally without side effects**, even in the most sensitive individuals. Heel injections do not interact with medications or supplements.
